

Silence on demand

ARKA SILENT
BOOTHs

Why ARKA Silent Booths?

Ensured fresh air

What good is quiet, if there's no air? Our booths come integrated with two adjustable, high-speed fans that will take care of CO2 scrubbing and fresh O2.

Control your booth

Adjust the light and ventilation levels. Set the perfect stage for your next deep work session. Once the user is gone, the pod goes into standby mode.

Materials that last

Highest grade materials like Baltic Birch plywood and natural wool are used to guarantee lasting durability and unique, well thought out design.

Filter out distractions

Five-layer insulation system achieves 33db noise reduction, as measured under ISO 11957:1996. This keeps your conversations private.

Assembled in minutes

Our booths are designed for quick assembly — under 90 minutes with a certified team or a bit more for teams with no prior experience.

Prioritizing user safety

ARKA Silent booths feature double-layer tempered laminated glass, making the doors as safe as possible for use in public spaces.

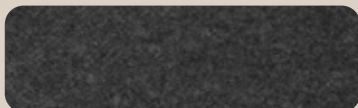

Design that fits your interior:
